

## Notes for IS 497 Project

- Build a plan for the dataset
- How can I make it easy to reproduce?
  - Document the entire process
  - Provide a step by step
- Provide resources on how to download OpenRefine
  - Helps the audience reproduce my process.
- Cite every source you use in the Jupyter Notebook file
- I can also create a reference folder for a proper citation
- Strong communication is important for this process because it helps the audience understand where I got my answers and analysis.
- Build a plan for a future project
  - Hypothesis could be helpful
  - Helps you focus on what to search for
- Hypothesis: Oldest cryptocurrencies = Highest Market Cap
  - What methods should I use to determine whether my hypothesis is correct or flawed?
